

Real deal.

The first networking manpack radio from the leader in SDR, the JTRS HMS* Manpack, will reach initial demonstration capability in the 4th Quarter of 2006. Beyond concept, it's the real JTRS radio hardware.

From the leader of the pack.

The JTRS HMS Manpack will be the first to fill the gap and meet the U.S. government's uncompromising standards for:

- Support of networking and legacy waveforms (including SRW Version 1.0)
 - Ch 1: HAVEQUICK, SINGGARS, AM/FM LOS
 - Ch 2: SRW v1.0
- Warfighter agility for all services

JTRS HMS is uncompromising. One architecture. Many configurations. Any mission.
