

First There.

The leader in software defined radios is proud to demonstrate the first SRW-networked JTRS radio – the JTRS HMS Manpack Technology Demonstrator.

Let the net-centric revolution begin.

Off the drawing board and into reality, the JTRS HMS Manpack TD is capable of running the first release of the Soldier Radio Waveform (SLICE 1.04p). This radio is the first to meet the U.S. government's uncompromising standards for:

- Support of networking and legacy waveforms:
 - Ch 1: HAVEQUICK, SINGARS, AM/FM LOS
 - Ch 2: SRW SLICE 1.04p
- Warfighter agility for all services
- Gap-free communications coverage

JTRS HMS is the Real Deal.

One architecture. Many configurations. Any mission.
