This Book Is Dedicated To  
Benjamin and Joel Moehring

Once there was a playful little cheetah who lived on the African savannah. He loved to play games with his friends: they raced each other, had small competitions and played hide and seek all the time!

One day the little cheetah and his friends decided to play "See Who Can Be The Loudest". The little cheetah really wanted to win, so he cheated by using a microphone.

Of course, the little cheetah won the contest.

At first, his friends thought it was fun and games, but soon they found and got mad at the little cheetah.

The little cheetah felt bad about cheating, so he went to his friends to talk.  
"I'm sorry." Said the little cheetah, "I should not have done that."

The little cheetah's friends forgave him, and everybody was happy again.

~~ROAR~~

But the little cheetah never roared again...

# FUN FACTS

A cheetah's chirp can be heard from a mile away, but a cheetah can not roar. Other cheetah sounds include purrs, bleats, barks, growls and hisses... Just no roar.

Roaring requires a special two-piece bone in the throat. All of the non-roaring cats like the cheetah have a one-piece hyoid bone. Only 4 cats can roar: the lion, tiger, leopard and jaguar.

# More Fun Facts

Cheetahs are found in Africa. They are mostly found in the grasslands of East Africa, however, cheetahs can range throughout any open country. From savannah to scrubland to desert; wherever there is adequate prey for them to survive.

[www.lions.org](http://www.lions.org)

Cheetahs do not live in dens or burrows. They will often rest in tall grasses or under trees. They can also be found napping on rocky outposts or hiding in the shrubbery.
